HAUNTING MUSIC of the harp, the uplifted song of fierce bards crying the glories of a wild and beautiful land—these have been the unquenchable voices of Wales, singing through the centuries of a will to live in freedom.

Today Wales still sings and still is free. It is a proud and highly individualistic unit of the United Kingdom, a principality of Britain. The heir apparent to the British throne traditionally receives the title of Prince of Wales, and the Welsh send members to represent them in the British House of Commons and nobles to sit in the House of Lords.

Part of Britain though it be, Wales is still Wales, and the Welsh are the Welsh: unique, different, a race of lithe and handsome men—Celtic, strong-featured—and fine-looking women. The Welsh cling to their own outlook and spirit, their own lilting speech, many of them still using their own ancient language—older than English in England.

The Welsh are above all a poetic people, and much of the unconquerable spirit of their warrior past, the grandeur of their mountains, and the serenity of their lovely valleys finds expression in their poetry and song.

Who Will Be Named Bard of Wales?

No event symbolizes more vividly the poetic soul of the Welsh and the unyielding pride and integrity that accompany it than the ceremony of the Churing of the Bard. This is the high point of the annual *National Eisteddfod* (pronounced *eyes-teth-fod*), a week of speeches, songs, pageants, and poetry competitions, all conducted in Welsh. With 20,000 Welshmen, I traveled in August to Llandudno, a coastal resort in North Wales, to see the successful poet chosen.

The large stage of an enormous prefabricated pavilion was banked with robed bardic dignitaries, and the television lights stabbed at them like searchlights. The 60 press chairs were filled, for the Bard of Wales makes national headlines. There was a hush of excitement—then suddenly a trumpet call and a hush. The big doors opened.

Music boomed. Marching with stately grace came the Archdruid Cynan. He wore a crown and long golden robes and carried a scepter. Herald, former archdruids, and a sword-bearer accompanied him. The sword-bearer,

bright its flame of individuality.
Welshmen still speak the language
of ancient Britons and nurture a
fierce pride in their national
heritage. Every man of this land
aspires to poetry and raises
his voice in song.

a fine figure of a man well over six feet, carried his huge sword effortlessly, the point of its long sheath resting on his belt (left). It must have weighed at least half a hundredweight.

As the officials reached the stage, the harps took over, garlanded little girls danced, and the long blue oxhorn—the Hirlas Horn—was presented to the archdruid as a ceremonial token of welcome.

The bardic chair stood empty in the center. Who would be seated there?

Giant Sword Bars the Chair

Now, I thought, I shall see one of these hill farmers, or perhaps a parson or a schoolmaster, a miner or a steelworker—for in Wales any man may be a poet—come forward for his great occasion.

Archdruid Cynan (who in daily life is the Reverend Dr. Albert Evans-Jones, C.B.E., D.Litt., of the island of Anglesey) stood up, stern and solemn. Dillwyn Cemaes, the sword-bearer, moved close to him.

In his wonderfully strong and melodious voice, the archdruid announced something in Welsh, very briefly.

A spontaneous roar of the most intensely felt emotion arose from the whole crowd. It was a moaning roar of heartfelt disappointment, with overtones almost of despair.

"No bard! No bard!" said the gentleman beside me.

Dillwyn Cemaes advanced, holding the great sword horizontally. Slightly unsheathing it, a few inches of steel protruding, he placed sword and sheath across the chair.

The archdruid spoke again in the tongue of the ancient Britons. No poem submitted was deemed worthy, he said; the ritual Chairing of the Bard would not take place.

Another cry of disappointment.

Again the resonant voice. Merit before ritual—no ritual for its own sake! The chair

Vibrant Welsh harp sings under fluttering fingers. Harpists of old enjoyed great privilege: insulting a royal harpist brought a fine of six cows and 110 silver pennies.

Procession out of the past: the Gorsedd, or Society of Welsh Bards, follows its banner to the stage in Llandudno for the National Eisteddfod. Standard-bearers wear red; green robes denote ovates, or recent initiates into the society; bards, musicians, and literati wear blue. The Eisteddfod, a competitive festival of the arts, dates from the Middle Ages, with trappings from the 18th century.

Exuberant Polish dancers cavort at Llangollen. Here each July come singers, dancers, and instrumentalists from more than twenty nations to share the international language of music. Folk costumes brighten Eisteddfod grounds during the six-day festival. Trophies proclaim, "Blessed is a world that sings; gentle are its songs."

Festive lights sparkle on the promenade at Llandudno, host for the National Eisteddfod in August, 1963. This popular resort, astride a peninsula that juts into the Irish Sea, welcomed 20,000 daily to the week-long, all-Welsh ceremonies that are held alternately in North and South Wales. Great Orme's Head thrusts a floodlit flank against a darkening sky. Church of St. Tudno, from which the town derived its name, tops the promontory.

No one worthy! The huge sword bars the chair as Archdruid Cywan, wearing gilded gorget and bronze oak-leaf crown, announces there will be no Charing of the Bard. Groan of disappointment erupts with his statement. For the fourth time in 25 years, no poem submitted met the standards. Cywan, the Reverend Dr. Albert Evans-Jones, won the chair in 1924. At the 1964 Eisteddfod in Swansea, R. Bryn Williams of Aberystwyth won the coveted award for a poem on the Welsh settlement of Patagonia a century ago.

Rainbow arching from luminous meadow . . . mist-haunted castle on the heights—thus Wales weaves its magic. The 14th-century fortress of Chirk, seat of the Myddelton family since 1595, overlooks the Vale of Ceirion and the English border. Nearby runs Offa's Dyke, an eighth-century ditch separating Anglo-Saxons and Welsh.

would stay empty. The lights beat upon the naked steel of the partly drawn sword. Mustachioed Dillwyn Cemaes, his strong face grim and his six-feet-plus looking like eight, glared at the 8,000 in the audience.

For a moment—intense silence. Then harps began to ring again as skillful fingers plucked vibrant strings.

The little girls, the three Orders of the Gorsedd (as the body of bards is called), the whole company, filed slowly from the stage and up the long aisle, the archdruid and sword-bearer leading them. Doors opened, and they passed out into the gray day. But the 8,000 still sat there in the huge pavilion, as if they had been stunned. Where else, I thought, would a people feel so intensely about poetry?

Welsh Spirit Sets Apart the "Fellow Countrymen"

I was staying at Bryn Mor, a cottage near the Eisteddfod ground. At the cottage I met farmer Trevor Owen.

When we discussed the ceremony that evening, Trevor said: "Perhaps the subject was too difficult. This year it was a poem based on the theme 'Genesis.' I didn't dare to try it myself at all. It's a disappointment to us not to see the chair awarded. We love to see a good man honored. We feel we're all honored, too, by just being there. There is a wonderful *hwyf* about it all." He pronounced it "*hoo-ill*."

Sailors' Pitch: Mounting men & Wales Report the World

To me, an Australian living in England, the Welsh are with foreigners and come less—no more the latter than the former. I have sailed with Welsh seamen in peace and

ships out of picturesque ports like Falmouth, Aberdeen, and Port Inverness on the Moray Strait. I have brought Australian grain to the Bristol Channel ports of Cardiff and Barry, and loaded them there for the tops of the earth. I feel close to these courageous and gifted people.

Covering little more than 8,000 square miles between England, the Arctic Channel and the Irish Sea, Wales is arguably a land of mountains, that, right, it rises at Snowdon to 3,560 feet higher than any peak in England.

university of Yale College, which it carries its name in 1716 in recognition of the bequest of the Honorable John Yale, former resident of this parish.

In his tomb in the churchyard, the name is spelled HIAL GHI YALE. Looking at this were two young men dressed in obviously American-style clothes. They were members of the Yale College Club, they told me, and they were visiting at a place called Llangoed, a house on the River Dee, to sing in a competition at Llangollen's Easter festival. This I learned was not an all-Welsh Festival, as I had heard, but an international festival.

"Come to Llangollen," they said. "You mustn't miss that."

So I did. I went, accompanied by two friends, Jones, former Wrexham blacksmith, in his car. It was raining "like the days of Noah and Isaac." We went the long way round, I gave the rain a chance to stop, and dropped in at Bryneglwys (pronounced Erioglwys) over the border.

The guide books said this was the ancestral home of the Yales. Isaac didn't know it, never did hear of any Yales around these parts. "Yale?" he said. "I was born here." I looked, and I got it.

As I turned to Yale, I saw a sign that said "Yale's were in need from Bryneglwys." He happened to live his last years near Wrexham, but was born in Boston, in the Massachusetts Bay Colony. It was that association which led to his gift of books and East Indian goods to the long-dead young American university.

Miners Sing to Tiahe Jaro

At Llangoed, flags of at least 25 nations flew over the railway station beside the Dee. The streets were a babel of tongues, accents bright with European costumes. But there was a great deal of Welsh too.

In a traffic jam by Llangoed's ancient bridge, a car drove to a halt as I crossed. The driver made burst into blood warms, imagination being song. They had on catkins and business suits, and they sang in Welsh. They were a group of miners from Llanelli, near Vale in South Wales, and they were going to watch the singing streets. I stopped, enthralled, and when a busy policeman waved them on. Still singing, they turned in the road for Rhydymain. The waters of the Dee splashed and gurgled merrily over the stones beneath the ancient bridge, eager to be in the singing too.

"The song is in their throats like seeing is in their eyes," said the policeman, still flaring his efficient arms.

Later, on the flower-heaped stage on the Llangollen field—the marquee seats looked and it was full—I saw the policeman himself, off duty now, singing in a choir.

After the performance, while walking across the same old road to the I met my friends from the Yale College Club, eating fish and chips out of small packets of newspaper as the locals did. Protruding from one's pocket was a small book, *How to Speak Welsh in Ten Easy Lessons*.

It might be "A Little Very Different."

second trip there. The first time he had one sh. Then he came back for ten others, and a hundred." —

Well, maybe I have never heard of anyone making corned-beef-lard-larders.

Though Maloc's saga lies in the twilight of legend, the Welsh have indeed left their impress on America. The pioneers who settled Jamestown, Virginia, in 1607 included "twenty Welsh gentlemen," and the *Mayflower*—commanded by a Welshman named Jones—brought seventy more to Plymouth Rock in 1620.

In the 1780s they came by the hundreds—mostly farmers, but some of wealth and education—stirred by William Penn's advertisements of "Pennsylvania . . . a fit place for Younger Brothers, and Men of Smooth Faces."

The Air is generally clear and sweet
Our produce four hundred fold."

They spread along the Schuylkill River fired with the dream of a self-governing barony. Though a New Wales never materialized, the names of the towns they settled—Bryn Mawr, Gwynedd, Merion, Bala-Cynwyd—still ring with their Celtic sound.

While searching for deer-skins for the legendary Maloc, a young Welshman named John Evans explored the wilds of the upper Missouri River, almost ten years before Lewis and Clark by appointment.

In the 19th century, tens of thousands of Welsh immigrants poured into America, settling in New York, Pennsylvania, Ohio, and Illinois; they brought needed skills from their homes and lands of Wales. Their descendants have graced the United States Senate and the Supreme Court.

Grease Filled With Pitch Shovels

Taxman Jones took me to Llanidloes, another day. He showed me the place by the old Church of St. Deuno on site Tremadoc, near Llanidloes, where the drovers used to muster their cattle for the trek to England, Scotland, and more over the rough roads.

"They used the cat's paw, but I never have made it," he said. "They used the geese too. Make them walk through a pool of pitch, then trimmed the cooled stuff to the shape of each goose's feet."

Mr. Jones drove me to a small village with the big name of Llanystrad-y-fach-as-tum-awey. "Llan means church," he explained, "and dwy" at the end refers to a river. The other part means "at the bend of," so it's the

church at the bend of the Dwy, Dwyfor River. It's not just a name. It's a description. You know where you are with these semi-ancient names we have in Wales."

In a beautiful spot above the River Dwyfor is the grave of Britain's famed Prime Minister of World War I—David Lloyd George, Earl of Dwyfor. The tumbling, springing waters of the river Dwyfor are the companions of his spirit as they hurry ardently toward the sea—the sea that in Wales is never far away.

"He wasn't one to make him self big," said Mr. Jones. "But he had something that drew the people when he was speaking. When he came down we all used to shout 'Lloyd George our hero!' You know, Lloyd George forever!" That was just how we felt.

Industry Expands in South Wales

North Wales cannot live by love-mess and legend alone. In recent years manufacturers have been attracted there. Plants employ thousands in the making of nylon and other synthetics, of jet-propellant, and of a special magnetic steel sheet. The coal and steel industries are well kept busy in South Wales in the valleys and along the Bristol Channel coast. The pig industry has really leaped ahead.

I headed south, along the road around Carmarthen Bay, toward Pembrokeshire. In the square at Fishguard, I glimpsed a familiar figure. He was more than six feet tall, lean and stalwart, and his strong face was heavily black-mustachioed. I took a second look. I was looking at the sword-bearer in *Llyn Cemaes* from the *Coroner's* of *Karne*.

I took a closer look. He was also my friend Indwyn Niles, mayor of Newport when I was sailing out of Fishguard in the 1950's, and now sheriff of Laverfordwest.

I spent a fascinating week with him. We met artists, poets, and holders of huge collections. We visited romantic ruins kept like museums with erudite part-time barmen down from the universities. We talked with trawlermen and tanker captains from Milford Haven, Pembrokeshire's wonderful port. In the mid 19th century Earl Cardigan's Ironclad, designer of the *Great Eastern*, largest steamship of her day, put upon an expedition to make Milford Haven chief British terminus for the passenger trade to Australia.

"Pembrokeshire has everything," Indwyn said. "Bronze Age barrows, ancient stone circles, Celtic forts, numerous prehistoric myths of saints and giants, great warriors."

Interviewer's Reflection

Interviewer's Reflection

1. The first part of the document discusses the importance of maintaining accurate records of all transactions, including sales, purchases, and expenses. It emphasizes the need for regular reconciliation and the use of reliable accounting software to ensure data integrity.

2. The second part outlines the various methods for calculating profit margins, including gross profit, operating profit, and net profit. It provides formulas and examples to illustrate how these calculations are performed.

3. The third part addresses the challenges of managing cash flow, particularly in the context of seasonal fluctuations and delayed payments from customers. It offers strategies for improving cash flow, such as offering discounts for early payment and negotiating better terms with suppliers.

4. The fourth part discusses the importance of budgeting and financial forecasting. It explains how a well-defined budget can help a business track its performance against targets and make informed decisions about future investments and expenditures.

5. The fifth part covers the basics of tax compliance, including understanding the different types of taxes that apply to a business and the steps required to file returns accurately and on time.

6. The sixth part provides an overview of the legal and regulatory requirements that businesses must adhere to, such as labor laws, consumer protection regulations, and industry-specific standards.

7. The seventh part discusses the importance of maintaining accurate financial statements, including the balance sheet, income statement, and cash flow statement. It explains how these statements are used by stakeholders to assess the financial health of the business.

8. The eighth part covers the basics of risk management, including identifying potential risks to the business and implementing strategies to mitigate them. It also discusses the importance of having a contingency plan in place to handle unexpected events.

9. The ninth part discusses the importance of maintaining accurate records of all business activities, including contracts, invoices, and receipts. It explains how these records are used to support the business's financial statements and provide evidence in the event of a dispute.

10. The tenth part provides a summary of the key points discussed in the document and offers final thoughts on the importance of maintaining accurate financial records and following best practices for business management.

1. The first part of the text discusses the importance of maintaining accurate records of all transactions, including sales, purchases, and expenses. It emphasizes that proper record-keeping is essential for determining the correct amount of tax liability.

2. The second part of the text describes the various methods used to calculate the taxable income of an individual or entity. It mentions that the calculation typically involves starting with gross income and then subtracting allowable deductions and exemptions.

3. The third part of the text explains the different types of taxes that may be applicable, such as income tax, property tax, and sales tax. It notes that the specific rules and rates for these taxes can vary significantly depending on the jurisdiction.

4. The fourth part of the text discusses the importance of understanding the tax consequences of various financial decisions, such as investing, borrowing, and spending. It suggests that consulting with a tax professional can be helpful in making informed choices.

5. The fifth part of the text provides a summary of the key points discussed and offers some final thoughts on the importance of staying up-to-date on tax law changes.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

2. Next, it is important to gather relevant information and data. This can be done through research, consultation with experts, or by analyzing existing data sets.

3. Once the information is gathered, the next step is to analyze it. This involves identifying patterns, trends, and relationships that can help in understanding the problem.

4. After analysis, the next step is to develop a solution or plan. This involves identifying the most effective approach to solve the problem, taking into account the available resources and constraints.

5. Finally, the solution is implemented and the results are evaluated. This involves monitoring the progress of the solution and making adjustments as needed to ensure that the problem is solved effectively.

The firefighters were called to the scene at approximately 10:15 p.m. on Tuesday, October 10, 2018. The fire was reported by a neighbor who saw smoke rising from the building. Upon arrival, the firefighters found a two-story residential building with a fire in the basement. The fire was contained to the basement and did not spread to the upper floors. The firefighters used a combination of water and foam to extinguish the fire. The fire was completely out by 11:30 p.m. The cause of the fire is still under investigation. The firefighters were praised for their quick response and effective work.

"Take a canoe," was one expert's advice. "A coracle isn't much for cro-sing. It's slow. It steers badly. It's wet. It's hard to handle in rapids. And it busts up easily on rocks."

I found out what he meant, though you can dry your coracle easily enough by the simple means of paddling to the bank, jumping up, pulling out the coracle and upending it like a basin to pour the water out. But you can't keep up any speed, and you are very close to the water.

Coracles Drift Toward Oblivion

The valleys of the Teifi has some of the most beautiful scenery in Wales, but you would need a month to see it all by coracle. The best way, it appeared, was to take my coracle up by road as far as the good water, and then drift down with the current.

A German man knew every bit of the river in the area that were licensed for all fishing. Trout must be licensed, from Cardigan bridge near the mouth as far up as Lledrhyd bridge. Cernarth men had the same sort of knowledge from the bridge to Cernarth Falls. Beyond that, nobody had any local knowledge. There were no more villages.

"There I go now at Cernarth for one of these days," and meaning "blacksmith" Jones told me where "They are taking away the licenses as we die out. There are only four left at Cernarth now."

I wish he said to see the coracles go. Yes, they are awkward but to drift with the air now and then a few lazy paddle strokes—strictly on the lake river. The hills slowly past the heavily wooded hills and pretty villages in a multitude of profiles you can almost hear the primroses opening their petals in the morning sun. This is a wonderful experience. Here and there ruins of castles or of abbeys stand gaunt on strategic hill tops. In the fields we can watch and chat black and white cows drinking from a sandpail by a bend of the river, stare with their big soft eyes as you float by.

At St. Dywysed, on the Teifi estuary, I found a wonderful fisherman—Capt. Dave-

Williams, 84 years old now, but, like so many Welsh seamen, once master of famous big sailing ships.

Through a fascinating evening we varied of long fragments of well-burned and breathless moments in big windjammers. He had served in such ships since 1872, until he retired at the end of World War II.

"My father was lost at sea in a Swansea copper-ore bark before I was two," said the old captain—a slight, kindly man, like the verger of a cathedral, soft-spoken, not at all resembling the pug-nose image of a Cape Horn shipmaster. "My mother had to bring it up. I don't know how she did it."

Captain Davey lived in an old stone house just down the river from two similar houses his great-grandfather had built from the earnings of a brigantine he owned.

"I used to go aloft," said the captain, "if something was wrong with the reef of my mizzen. But the neighbors got alarmed. They don't know what it means to go aloft in a sailing ship. A house stays still."

From the street outside came the cries of a noisy children on their way to the beach. St. Dywysed is a seaside resort now, and its small schooners, barks, and brigantines—or seagoing ships of any kind—are no more.

Later-day Industrial Revolution

Back in the Welsh capital of Cardiff, I talked to Lord Brecon, then Minister of State for Welsh Affairs, one of the two ministers the British Government appoints to look after Welsh matters. Lord Brecon sits in the House of Lords. Sir Keith S. Joseph, the other minister, sits in the House of Commons and was a member of the British Cabinet working after national housing and local government in early Wales.

"A later-day industrial revolution here overhauled the old coal and steel industries and introduced a whole range of new industries," Lord Brecon told me.

"Modern Wales is among the most exciting, the most enterprising countries in the world. The Welsh economy is now liberally equipp-

Spanish of rain on up of waters, bare not running to hear water bears on sandy stream. The morning pair of Harlech Castle commanding rocky sea-paths—and below the bloody battle-

resistance. "War cries of her hills and valleys" ring the English words to John Canning's "The Harlech Castle" (1864). Among the last of the Royalist strongholds, Harlech Castle on the River Cernarth's River (1864).

Moths That Behave Like Hummingbirds

Photographs by TREAT DAVIDSON

YOU NEVER KNOW what's going to come out of the camera. I wanted pictures of hummingbirds hovering over flowers in the yard of my home in Warren, Pennsylvania. So one spring evening I set up my camera with its "electronic self-taker," the gear I devised to photograph automatically small wildlife in action. But the film, when developed, revealed that I had captured not only hummingbirds, but a strange interloper as well.

This was my introduction to the sphinx moths, many of which bear amazing resemblance to hummingbirds in their flight and feeding methods. I decided to become better acquainted.

Shortly afterward, I acquired a hundred pupae from an agricultural research station in North Carolina. I put them in an empty dirt-floored aquarium.

A month later the sphinxes began emerging from the pupal stage, and soon were making nightly flights in their "moth motel," a large screened cage I built for them. Inside I placed flowering tobacco plants, a favorite food of this night-flying species, *Protoparce sexta*. And for many warm, clear evenings the flutterers—darting from bloom to bloom to suck the nectar with their long, thin tongues—took their own pictures by breaking a light beam and thus triggering camera and flash.

Eyes glow red as sphinx moths, caught by flash after dark, sip the sweet juice of tobacco blossoms.

From the first stage of the life cycle, the egg, the caterpillar grows and develops. It eats a lot of food and grows very fast. After a few days, it becomes a pupa. The pupa is a small, round, brown object. It stays in the ground for a long time. Finally, it becomes an adult moth. The adult moth is a large, brown moth with long wings. It can fly and eat nectar from flowers.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions, including sales, purchases, and expenses. It emphasizes the need for a systematic approach to record-keeping, such as using a ledger or accounting software, to ensure that all financial data is properly documented and organized.

2. The second part of the document focuses on the importance of regular reconciliation of accounts. It explains that reconciliation involves comparing the company's internal records with external statements, such as bank statements or supplier invoices, to identify any discrepancies or errors. This process is crucial for ensuring the accuracy of the financial statements and for detecting any potential fraud or mismanagement.

3. The third part of the document discusses the importance of budgeting and financial planning. It explains that a budget is a financial plan that outlines the expected income and expenses for a specific period, typically a year. By creating a budget, a company can better manage its resources, control its costs, and make informed decisions about its future operations.

4. The fourth part of the document discusses the importance of financial reporting. It explains that financial reports, such as the balance sheet, income statement, and cash flow statement, provide a comprehensive overview of a company's financial performance and position. These reports are essential for management decision-making, for communicating with investors and creditors, and for complying with regulatory requirements.

5. The fifth part of the document discusses the importance of financial control. It explains that financial control involves implementing policies and procedures to ensure that the company's financial resources are used efficiently and effectively. This includes measures such as establishing a system of internal controls, monitoring financial performance, and taking corrective action when necessary.

6. The sixth part of the document discusses the importance of financial risk management. It explains that financial risk management involves identifying, assessing, and mitigating the financial risks that a company faces. These risks can include currency fluctuations, interest rate changes, and credit defaults. By implementing effective risk management strategies, a company can protect its financial assets and ensure its long-term stability.

7. The seventh part of the document discusses the importance of financial transparency. It explains that financial transparency involves providing clear and accurate information about a company's financial performance and position to all stakeholders, including investors, creditors, and the public. This transparency is essential for building trust and confidence in the company and for attracting investment.

8. The eighth part of the document discusses the importance of financial innovation. It explains that financial innovation involves developing new financial products and services that can help companies better manage their finances and improve their financial performance. Examples of financial innovation include the use of blockchain technology for secure transactions and the development of new financing options for small businesses.

9. The ninth part of the document discusses the importance of financial sustainability. It explains that financial sustainability involves ensuring that a company's financial resources are sufficient to support its long-term operations and growth. This requires a focus on reducing costs, increasing revenue, and managing debt effectively. By achieving financial sustainability, a company can ensure its long-term success and contribute to the overall health of the economy.

10. The tenth part of the document discusses the importance of financial education. It explains that financial education involves providing individuals and businesses with the knowledge and skills needed to make informed financial decisions. This can include topics such as budgeting, saving, investing, and understanding the risks of different financial products. Financial education is essential for promoting financial literacy and for ensuring that individuals and businesses are able to manage their finances effectively.

Gulf of Alaska

The Gulf of Alaska is a body of water located in the northern part of the Pacific Ocean, between the coast of Alaska and the Aleutian Islands. It is one of the largest gulfs in the world, covering an area of approximately 1.5 million square miles. The Gulf is known for its rich marine life, including salmon, halibut, and various species of whales. It is also a major shipping route for oil and other goods.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

2. The second step is to gather relevant information and data. This can involve research, consultation with experts, or collecting data from various sources.

3. The third step is to analyze the information and data. This involves identifying patterns, trends, and relationships that can help to answer the question or solve the problem.

4. The fourth step is to develop a solution or answer. This involves applying the analysis to the specific problem or question and developing a plan of action.

5. The fifth step is to implement the solution or answer. This involves putting the plan into action and monitoring the results to ensure that the problem is solved or the question is answered.

6. The sixth step is to evaluate the results. This involves assessing the effectiveness of the solution or answer and identifying any areas for improvement.

7. The seventh step is to communicate the results. This involves sharing the findings with the relevant stakeholders and providing a clear and concise summary of the results.

8. The eighth step is to document the process. This involves recording the steps taken and the results achieved, which can be used for future reference and to improve the process.

9. The ninth step is to review the process. This involves reflecting on the entire process and identifying any lessons learned or areas for improvement.

10. The tenth step is to conclude the process. This involves finalizing the results and ensuring that all requirements have been met.

1. The first step is to identify the problem or question that needs to be addressed. This involves understanding the context and the specific requirements of the task.

2. Next, it is important to gather relevant information and data. This can be done through research, consultation with experts, or by analyzing existing data sets.

3. Once the information is gathered, the next step is to develop a plan or strategy. This involves breaking down the problem into smaller, manageable parts and determining the best approach to solve each part.

4. The fourth step is to implement the plan. This involves putting the strategy into action and monitoring progress along the way.

5. Finally, it is important to evaluate the results and make adjustments as needed. This involves comparing the actual outcomes with the expected results and identifying any areas for improvement.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and the role of the accounting system in providing reliable financial information.

2. The second part of the document describes the various methods used to collect and analyze data, including interviews, surveys, and focus groups.

3. The third part of the document presents the results of the study, showing that the accounting system plays a crucial role in the success of the organization.

4. The fourth part of the document discusses the implications of the findings and provides recommendations for future research.

5. The fifth part of the document concludes the study and summarizes the key findings.

For a few days Juneau became a base of operations from which we struck out by air and by sea. I went first 25 miles eastward helicopter-landed near the middle of the 1,200-square-mile Juneau Icefield, where scientists and students of the Summer Institute of Coastal and Estuarine Studies gathered. The group's leader, Dr. Maynard M. May, had been in charge of physics studies on the National Geographic Society-supported American Mount Everest Expedition (October 1963, GEOGRAPHIC). Now he was working under another Society research grant to complete a classic study of Alaskan ice.

Here, only 5 minutes away from the mild climate of Juneau, I found myself in an arctic environment. Dr. Miller explained the abrupt temperature change.

The temperature at the bottom of the lake was below freezing for most parts of the field in near-poor climate. A thermometer at the bottom of the lake showed a zero Fahrenheit one winter.

"The ice you're standing on is less than 10-wards and" Dr. Miller continued "It will reach

We still don't know how it got there, but Mr. Miller said "The next morning it was gone."

I flew back to Juneau on the next mail carrying helicopter. Before we left the area, Alaska's Senator Ernest Gruening, Dr. Miller and I scouted the superb Taga River country by bush plane. The senator wanted Dr. Miller's opinion on a proposed route for a road from Juneau to the Canadian highway.

We flew low up the valley, circling moose grazing in the flats, over lakes and steep slopes in the flanks of the mountains. We circled the Devils Paw, a rocky crumpling 4,000 feet above the forested Flatt. Ken Loken treated us to a symphony of wild scenery.

Senator Gruening, Alaska's former Governor, knows and loves the wilderness. "He's walked or flown over most of it."

"Mr. Garrett," he said, "this piece of country we're looking at is one of the Nation's

most valuable resources. With our population expanding and its needs increasing, we must

expand our recreation wilderness areas in the next 10 years. And here in this new state with only one percent of America's people, two-thirds of her public lands, one-third of her national park lands, and one-fifth of her total forest acreage. He told us that despite a general depletion of salmon in past years, there was a record run then going on in Icy Strait. He arranged for a report on commercial fishing by a

1. The first part of the text discusses the importance of maintaining accurate records of all transactions. It emphasizes that this is crucial for ensuring the integrity of the financial system and for providing a clear audit trail. The text also mentions that this practice helps in identifying any discrepancies or errors early on, which can prevent larger issues from arising.

2. The second part of the text focuses on the role of technology in modern accounting. It highlights how software solutions have revolutionized the way businesses manage their finances, allowing for faster processing times and more accurate calculations. The text also notes that technology has made it easier for businesses to access real-time financial data, which is essential for making informed decisions.

3. The third part of the text discusses the importance of staying up-to-date with the latest accounting standards and regulations. It emphasizes that businesses must regularly review and update their accounting practices to ensure compliance with the latest requirements. The text also mentions that this helps in maintaining the highest level of transparency and accountability.

4. The fourth part of the text discusses the importance of having a strong internal control system. It emphasizes that this is essential for preventing fraud and ensuring the accuracy of financial statements. The text also mentions that a strong internal control system helps in identifying any weaknesses or vulnerabilities in the financial process, which can be addressed proactively.

5. The fifth part of the text discusses the importance of having a clear understanding of the business's financial goals and objectives. It emphasizes that this helps in making strategic decisions and in allocating resources effectively. The text also mentions that this helps in monitoring progress and making adjustments as needed.

6. The sixth part of the text discusses the importance of having a good working relationship with the tax authorities. It emphasizes that this helps in ensuring compliance with tax laws and in minimizing the risk of penalties. The text also mentions that a good working relationship can also lead to more favorable treatment in certain situations.

There were men in the hall looking for the mother lady. Those men had to be sampled. Later the railroad provided beds. We carried on as best we could. A town dies hard.

We told her we wanted to walk the Ch'kool Trail to Bennett. British Columbia's oldest trail, Mr. Harte said, it was named after a man-killer in the genre of the famous "Wagon Wheel" trail.

It's not as bad as the old stories make it. You have to realize that some of the men who suffered so on the Chagos were soft. They were 'chickens,' as we call them. Some, like my father, were clerical workers. It was difficult for them.

We first checked him out most of the forenoon getting our packs light enough to carry yet find enough to provide for four days in the wilderness.

I tried to tell them that I understood and respected their culture, but I got nowhere until I carved a Tlingit mask myself and took it to the village. One of the old men stepped up and said, 'White man, you gave me a new idea. You are a good man, but I am not a Christian.'"

There were now only two or three Indians who came to the dance and tents and make dances and some of the women. We enjoyed the dances that evening with about 200 tourists from the ferry and a tour boat. The sky darkened as we left to catch the sunset on the Kodak. We had a good dinner and a good night's sleep. The ship was a good one, and we were served the best food. The ship began to pitch, yaw, and roll, and a few minutes later the ship was crashing on the reef deck. Dinner was cancelled. During the night the ship rolled as much as 45 degrees. A few days later we went to join his boat. It was a good one, and we were served the best food. The ship was a good one, and we were served the best food.

hit the snow and they both tumbled down the cliff. The photographer kept on snapping. He never shot a frame."

Alf left as he would return in five days. We saw several bears along the streams during our first three days, but none close enough for good photography. On the fourth morning, I loaded my pack and went into the bush looking for them.

I had walked a few miles when the sense of a sound I really hadn't heard made me duck—so in the bear path I was following. Seconds later a cub appeared at our 70 feet away. As I lifted the camera, another one joined him. I quietly eased the lens through the brush, squeezed off one frame—at a. Immediately fell into that category of waters to whom bears look bigger when out in the woods. The mother I hadn't seen heard the camera click, stood up beside her babies, and looked straight at me (page 816).

She probably wasn't eight feet tall, but she looked ten. I made one picture before she started toward me, then I dropped my camera and reached for Alf's 6 shot rifle, to aim I could get her down before she got her rear end up. She took a step or two, stood up again, looked my way with an inquiring rather than angry expression, then turned and disappeared into the brush.

I neither saw nor saw them again. Their silence was more eerie than their presence.

Alaska's Progress Threatens Bears

Unfortunately for the bear, progress is closing in on him. Kodiak ranchers claim they are losing cattle to the bears at a serious rate. Last summer, with state support, a man equipped with an gas engine rifle was used to kill bears spotted in the 2,000-acre

The clash between "bear" men and men had been smoldering, but this brought it to a flame quick. Says Ron Harst, one of the cattle ranchers whose herd had been hit by the bears.

Nobody enjoys watching an end of a river find a salmon stream more than I do, but I lose a darn sight more heart to the bears than I market. Civilization is moving north, and the bear is going to have to give way.

men. Rangers of the Alaska Department of Fish and Game admitted that cattle were here to stay, but felt better herding would help, especially in the spring when the bears are hungry and the cattle are weak. The fight will go on more later, but I'm afraid that in the end the bear, like the bison, will suffer most.

Tide-washed Homer Spit, a 4½-mile tongue of land extending to Kachemak Bay from Homer, Alaska, dropped as much as 6 feet during the 1964 Alaskan earthquake. A mud tide on a summer evening in 1964, the spit still stands above water. But a higher than normal tide in November 1964 nearly submerged it during it. The Land's End resort area at its tip remains in business on spite of various problems it faces.

No land at Land's End: Homes drift about beaching above row of waters, and floods to wash. Millions of tons of oil are being dumped to rebuke the spit.

we flew back to Kodiak in time to catch the northbound ferry for Homer. After a relatively calm return trip, we off-loaded at the dock at the end of Homer Spit, a 4½-mile long finger of land that settled an average of 4.5 feet during the quake. High tides still threaten it, however, but no tons of tons of cargo are being brought in to save it.

Homer residents will tell you they have the best climate, the richest farm land, the greatest growth potential, and the finest scenery in Alaska. Civic pride is as universal as understanding.

Last the spit and across Kachemak Bay we could see six glaciers in the Kenai Mountains. Not far from Homer we watched a herd of Dall sheep graze in a high valley near Tasumena Glacier. Moose is found in the nearby Kenai National Moose Range. Fresh crab, halibut, flounder, shrimp, and salmon were for sale at the docks. At Homer's Club just north of the town, we learned, have

has a fish from Kodiak that afternoon. Joe
travels an Alaska-size platter of moose and
caribou steaks from his freezer. Donna capped
the menu with three Baked Alaskas.

The next morning we started the home
home to the beach 48. The days were bright
and the evening chills carried the first hint of the deep winter season. Yet
a warm fire burned for Alaskans. For
the caribou and the Haines Highway
and the open landscape drifting across

As we drove away from Anchorage a sign
reminded us that the Alaska Highway has

along the coast. The Alaska Highway
traffic only 18 years ago. The Alaska
portant to this territory. The Alaska
Trail to our earlier history.

Now the marine highway is a new
train to the north. The Alaska Highway
advised a ferry run between Vancouver and
and the Alaska Ferry System to Alaska.
The Alaska Ferry System already exists from
from the State of Washington to the coast
Victoria on Vancouver Island. This will
make the ferry route through the Pacific
the Alaska Highway from parent nation to
young state. The Alaska Highway is great and im-
portant growth.

The Living Sand

Article and photographs by
WILLIAM H. AMOS

Driven by sea winds, moving dunes creep inland from Cape Henlopen, on the Delaware coast. Seemingly devoid of life, the waves of sand actually harbor a fascinating world of their own.

MY SNEAKERS press into the sand, and I feel the soft give of the sand on Cape Henlopen, Delaware Bay. The shimmering shore I shall not see for the August sun and sea on the Atlantic Sahara of sand has been covered. I feel the sand under my feet. I fancy that I am the only living creature on the Henlopen. It is a pleasant thing to work with terming masses.

Serious study of water and sand.

the sand, the wasp flying slowly, returns to position. A dead bee fly in position is a sho, for female wasps provision the nests with dead crickets and spiders. This alone mother enters her burrow with an egg on the bee fly, the food that will nourish the larval wasp when it hatches.

That evening, as I drove to my home in Middletown, Delaware, I conjectured that the Hymenoptera might support more life than most people, including biologists, had supposed. If a few digger wasps could live there, why not other creatures? By the time I pulled into my driveway I knew that I must return to the dunes and inspect them more closely.

Grasshopper Wears Sandy Camouflage

Several weeks later I was back, with my son Bal, to seek out the curious wasps. We found none, but, as we discovered another time, the burrows virtually honeycombed some of the dunes. Wand'ring ahead, Bal abruptly turned to ask if there were many grasshoppers on the dunes.

"Here?" I laughed. "Sand is hardly the place for grasshoppers."

"Well, what's that?" he demanded.

Eyes straining, I could not see a thing on the shimmering white surface. Then, suddenly, up leaped a large sand cricket. A few yards from us I liver again and exclaim:

At reaching the spot indicated, Bal and I discovered the insect sitting fully exposed on the surface, opposite page lower left. Blending with that of the sand. Its camouflage is great. That it belonged here—that it had not strayed in from a nearby meadow.

As Bal and I kneeled on the scorching sand, we realized that our bodies had entered a warmer stratum of air. As I extended my hand closer toward the surface, I felt the air grow hotter with every inch.

"How can the grasshopper stand it?" Bal asked. As we both gazed at the insect, we knew—but we watched and learned.

The insect, which at first had squatted down on the sand, now raised its body high upon its long legs. In a few moments it flew into the cooler air above, landing some 20 yards distant.

"That's one way to escape a hotfoot," Bal cried, and he, too, springing to his feet, and raced to the shade of a small patch of grass growing at the edge of the dune. I wasted no time in joining him.

On my next trip to the dunes, I took along a laboratory thermometer. I found that the temperature at the surface of the sand hovered near 120° F., and in spots soared as high as 135° F. At head level the air was 75° F. (continued on page 827)

Bal's discovery

The insect stands alone. The insect reveals the palace of sand grains. In the sand, it will tell the sand with its head. The insect is a grasshopper that wanders in

The submergence sand proved far more stable. Six inches below the surface, over most of the temperature remained about 60° F. In the hot afternoon sun I could write the my leg deep in the sand to cool my scratch.

"Name?" It consists simply of noticing surface etchings on the sand, and trying to guess what caused them. In this way we have learned the telltale tracks of lizards, toads, tortoises, beetles, snakes, velvet ants, as well as blowing pine cones, bits of paper, and rain pits and rivulets.

Wind and Grass A Photograph the Same

At times the sculptor is the wind, and when a versatile artist it is. It folds the sand surface into gentle ripples and creases it into a knife edge along grass-head crests. It pushes and lifts sand particles up the long, gentle windward face of a dune. Then with rolling turbulence drops them over the steep lee side. A precarious slope is a child's delight but a rescuing parent's dilemma for with every two steps up, you slip a full step back.

For my daughter Julie, the wind writes secret messages. It twirls dried blades of marram grass, broken and bent but still

anchored to the dune back and forth on the same, striking perfect arcs. At times gusts whirl the blades completely about, a school boy's compass could not do better (below).

Julie quietly watches the wind writing and tries to repeat in kind, but her arcs and curves are deep and lack symmetry. Sighing, she admits, "The wind writes better than I do." I tell her that experience has something to do with it: the wind has been practicing for millions of years.

As the breeze dies and the last rays of the sun fade in the night sky, we see the glow of candles on the sand, we listen, before beginning our songs, to the singing of others chirping across the dunes.

The air grows chill, and we dig hands and forefeet into the still warm sand. Nearby a whippoorwill calls out his name to us. Julie shivers delightedly. "Oh, Daddy," she whispers, "let's come back often."

We do.

THE END

Wriggling reptile fascinates the author's wife Catherine and her daughter Julie. Though harmless, the house snake *Heterodon platirhynchus* appears lethal—puffing and hissing if provoked.

Whipped by whistling wind, marram grass draws concentric circles in the sand to the delight of seashore children. In colonial Massachusetts, now abandoned coastal inhabitants of certain coves of north-pointed marram grass recognized even then as a valuable wind-silencer.

Broadened trail marks a snake's progress through Haulopen Dunes. Slithering over the sand, the reptile puffs up pressure ridges, revealing its direction of travel, here top to bottom. To avoid daytime heat, snakes usually move by night leaving gray and white signatures on the dunes.

IN THE DUST as the heat an American-made tank tore at the pavement next to me and stopped. The South Vietnamese general in the turret swerved his 30-caliber machine gun. A burst of machine-gun fire angled off the machine gun came an American pilot. A member of the South Vietnamese Air Force. From the air, the tank was hit.

The tank was hit and the pilot was pulled out of its drive, the rockets within range. In its path came another.

Things could blow up any time," said the sunburned United States Air Force captain at my side. And there we stood at Tan Son Nhut, the airport of Saigon, helpless on the brink of catastrophe.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions, including sales, purchases, and expenses. It emphasizes the need for a systematic approach to record-keeping, such as using a ledger or accounting software, to ensure that all financial data is properly documented and organized.

2. The second part of the document focuses on the importance of regular reconciliation of accounts. It explains that reconciliation involves comparing the company's internal records with external statements, such as bank statements or supplier invoices, to identify any discrepancies or errors. This process is crucial for ensuring the accuracy of the financial statements and for detecting any potential fraud or mismanagement.

3. The third part of the document discusses the importance of budgeting and financial planning. It explains that a budget is a financial plan that outlines the expected income and expenses for a specific period, typically a year. By creating a budget, a company can better manage its resources, control its costs, and make informed decisions about its future operations.

4. The fourth part of the document discusses the importance of financial reporting. It explains that financial reports, such as the balance sheet, income statement, and cash flow statement, provide a comprehensive overview of a company's financial performance and position. These reports are essential for management decision-making, for communicating with investors and creditors, and for complying with regulatory requirements.

5. The fifth part of the document discusses the importance of financial control. It explains that financial control involves implementing policies and procedures to ensure that the company's financial resources are used efficiently and effectively. This includes measures such as establishing a system of internal controls, monitoring expenses, and conducting regular audits to ensure the integrity of the financial data.

6. The sixth part of the document discusses the importance of financial risk management. It explains that financial risk management involves identifying, assessing, and mitigating the potential risks that could affect a company's financial stability. This includes measures such as diversifying investments, hedging currency risks, and maintaining adequate insurance coverage.

7. The seventh part of the document discusses the importance of financial transparency. It explains that financial transparency involves providing clear and accurate information about a company's financial performance and position to all stakeholders, including investors, creditors, and the public. This is essential for building trust and credibility, and for ensuring that the company is held accountable for its financial actions.

8. The eighth part of the document discusses the importance of financial innovation. It explains that financial innovation involves developing new financial products, services, and technologies to improve the efficiency and effectiveness of financial operations. This includes measures such as adopting digital accounting systems, using blockchain technology for secure transactions, and exploring new financing options.

9. The ninth part of the document discusses the importance of financial sustainability. It explains that financial sustainability involves ensuring that a company's financial resources are sufficient to support its long-term operations and growth. This requires a focus on reducing costs, increasing revenue, and managing debt effectively to ensure that the company remains financially viable over time.

10. The tenth part of the document discusses the importance of financial ethics. It explains that financial ethics involves adhering to a set of moral principles and standards that govern financial behavior. This includes measures such as avoiding conflicts of interest, disclosing potential conflicts, and ensuring that all financial transactions are conducted in a fair and honest manner.

These results suggest that the model is able to capture the underlying structure of the data, and that the model is able to capture the underlying structure of the data.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions, including sales, purchases, and expenses. It emphasizes the need for consistency and transparency in financial reporting.

2. The second part of the document outlines the various methods used to collect and analyze data, including surveys, interviews, and focus groups. It highlights the importance of selecting appropriate samples and ensuring the reliability of the data collected.

3. The third part of the document describes the process of identifying and measuring the variables that influence the outcome of the study. It discusses the challenges of operationalizing abstract concepts and the importance of using valid and reliable measurement tools.

4. The fourth part of the document discusses the various statistical techniques used to analyze the data, including descriptive statistics, inferential statistics, and regression analysis. It emphasizes the importance of interpreting the results correctly and avoiding common pitfalls.

5. The fifth part of the document discusses the importance of communicating the findings of the study to the relevant stakeholders. It emphasizes the need for clear and concise reporting and the importance of providing practical recommendations based on the research findings.

"I can understand him," said he, "because I have been through the same thing myself. I know how it feels. But you come from another country, you can afford to open your eyes."

1. The first part of the document discusses the importance of maintaining accurate records of all transactions, including sales, purchases, and expenses. It emphasizes the need for regular reconciliation and the use of reliable accounting software to ensure data integrity.

2. The second part outlines the various methods for collecting and analyzing market data. This includes primary research through surveys and focus groups, as well as secondary research using industry reports and public data sources. The goal is to gain a comprehensive understanding of the market landscape.

3. The third part focuses on developing a robust financial model. This involves projecting future revenue, costs, and profits based on historical trends and market forecasts. Sensitivity analysis is used to assess the impact of different assumptions on the overall financial performance.

4. The fourth part addresses the challenges of scaling a business. It discusses the need for efficient operational processes, strong leadership, and the ability to adapt to changing market conditions. Key strategies for growth are identified, including diversification and strategic partnerships.

5. The final part provides a summary of the key findings and recommendations. It stresses the importance of continuous monitoring and adjustment of the business plan to stay on track and achieve long-term success.

strong and so strongly to red. One day my friend Le and I drove out of the city. We crossed the Saigon River on a new bridge and headed northwest on the Bien Hoa road way. Just northwards to American air defenses in Viet Nam by USOM, the United States Operational Mission.

We passed a new housing development for professors at Saigon University, a new cement plant, new power lines, built by Japanese engineers as part of World War II reparations.

Just past the spot where a USOM official, Gustav C. Hertz, had been kidnapped by the Viet Cong the week before as he came by on his motorcycle, we turned off the highway and into a narrow road between rice patches, palms, and fields of sugar cane.

A man went by carrying a bird trap. He told us: "He's got a female turtle dove in there, a white bird. With her he might catch twenty more today, and tomorrow you'll find them in the Saigon wet market."

After another bridge we reached our destination—the estate of the rich, long dead Don Vinh Nhon, on Phu Island. Hidden from only two miles away sprawled the Bien Hoa airbase, where Viet Cong marauders had just destroyed five American jet bombers.

Grapefruit Trees and Viet Nam to War

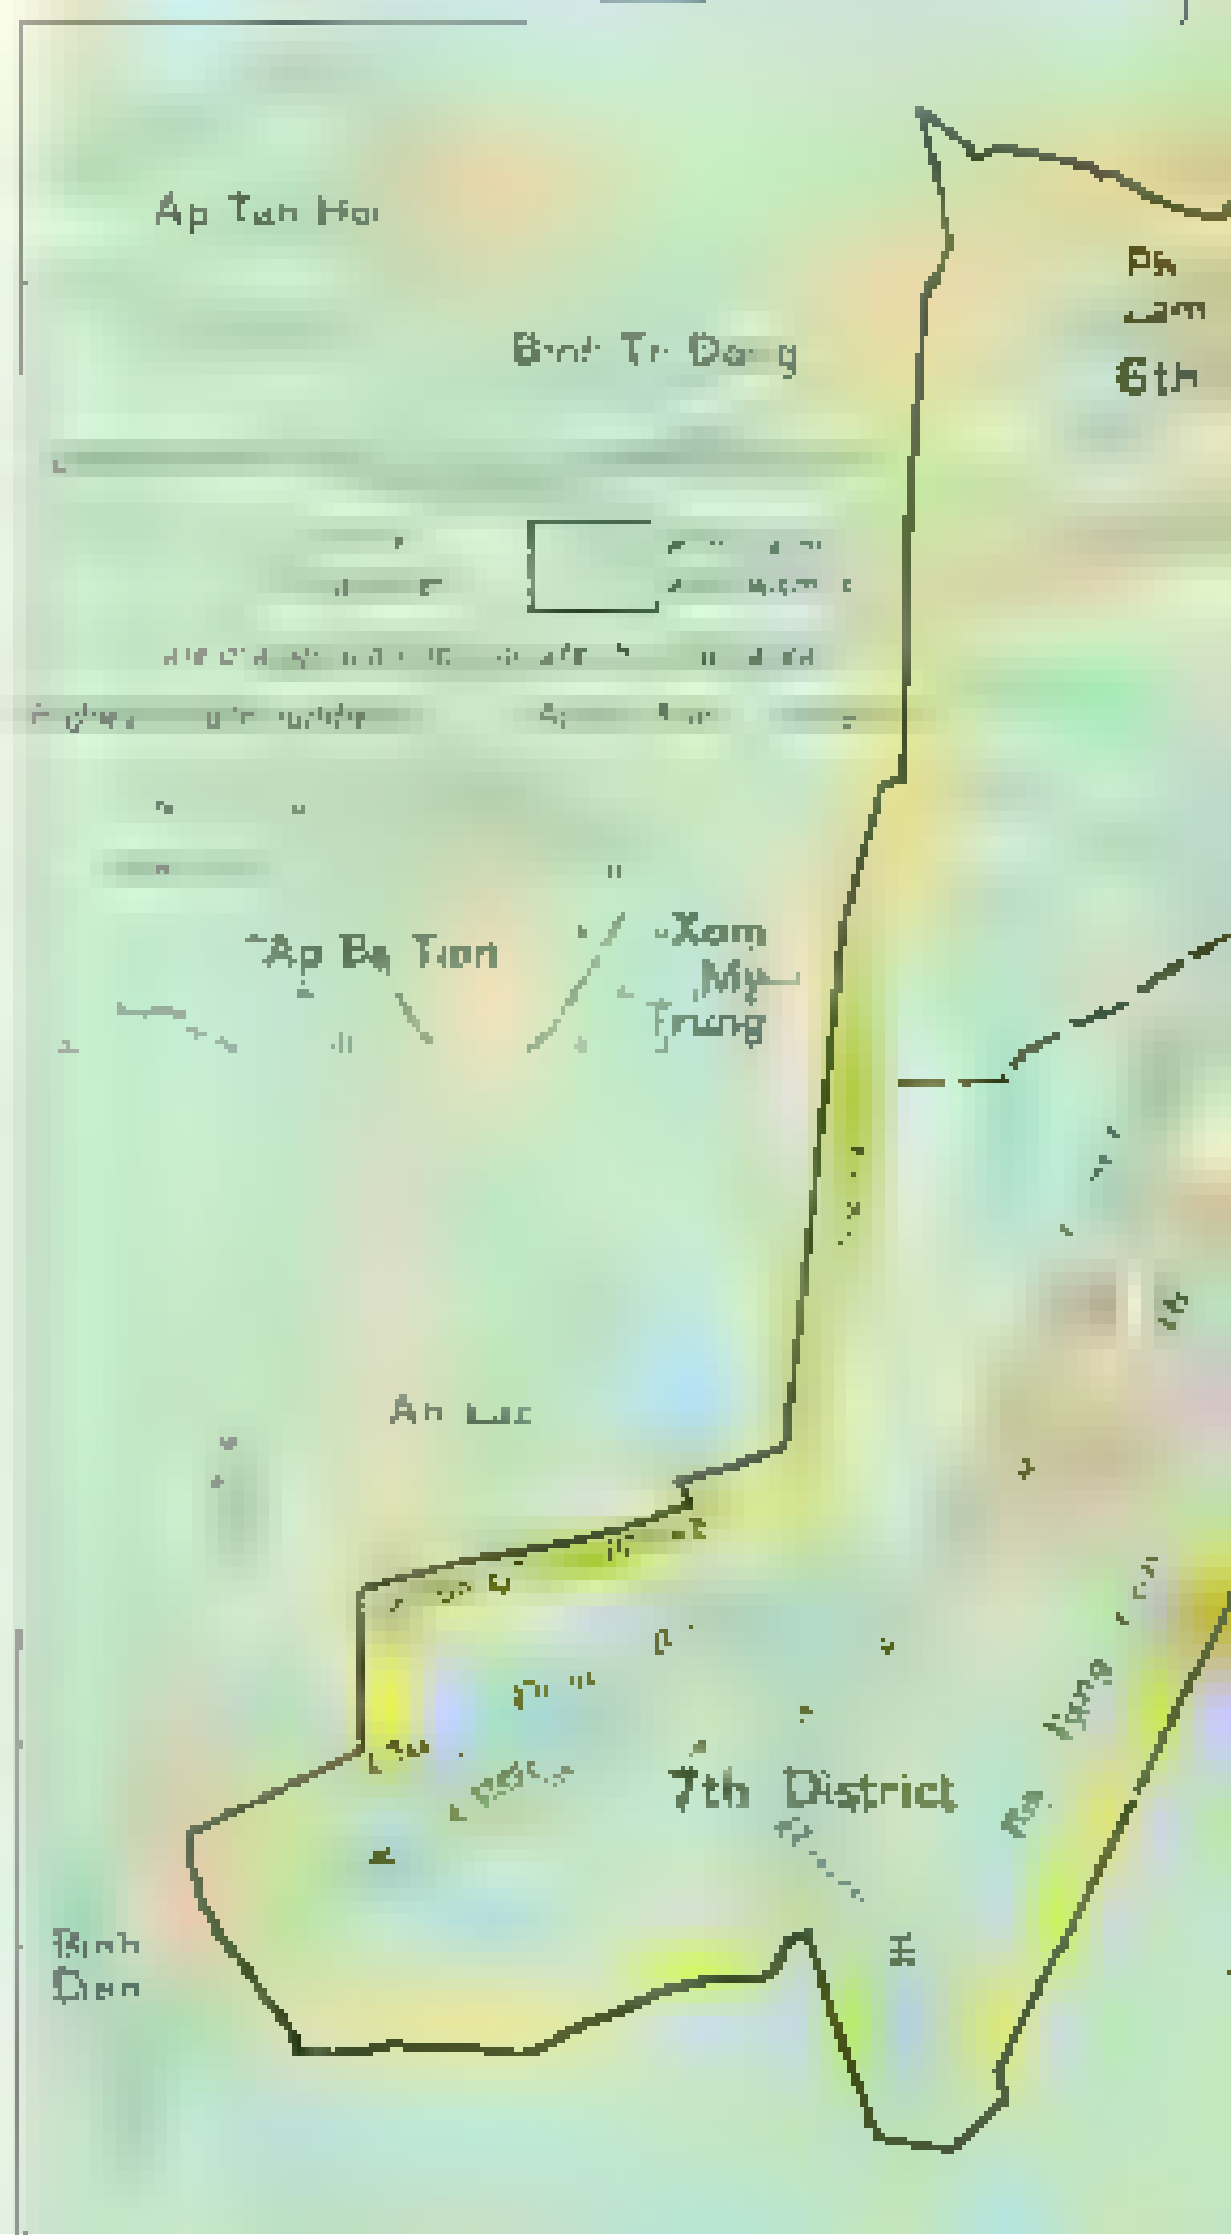

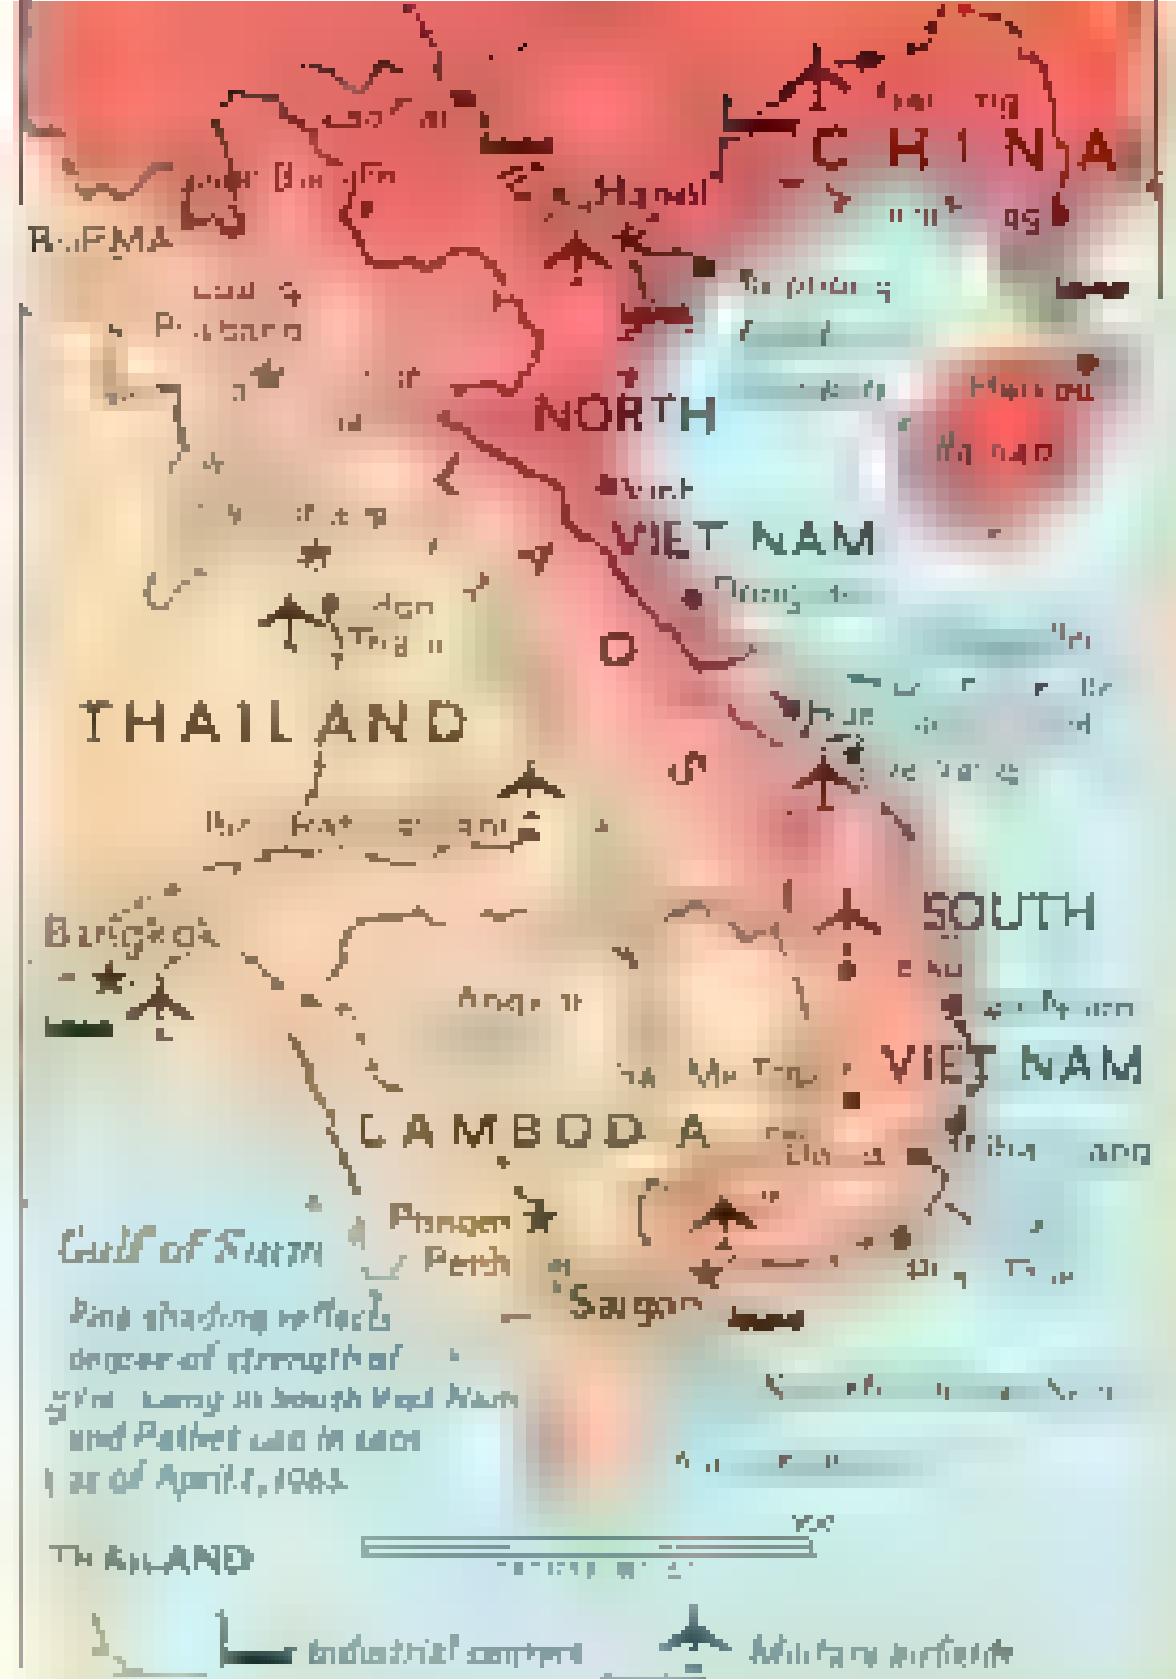

Mr. Nhon spoke of the island's remarkable flora. The velvety grass that glows in the dark. The orange firecracker flower at night. The big mango tree bearing fruit practically at sea level, its soil cooled by the river. And the numerous grapefruit trees, whose seeds were brought from the north many years ago. Mr. Nhon owned 2,000 trees, as a rule each produced some 100 grapefruit twice a year, for a total yield of 400,000 a year. Mr. Nhon was the grapefruit king of Saigon.

"No more," he said. "Look, not one tree has survived. About 20 percent of my trees are dead."

Then he explained, chemicals were being used along the highway to kill vegetation and make it more difficult for the VC to set up bases. "I've seen the flowers this way," said John. "Grapefruit are expensive in Saigon this year."

War-battered capital

Heading out of the water comes to a stop of the Song Suoi on the Saigon River. Broad two-lane roads with numerous buildings line the city. Riverbank parks accommodate commercial vessels. Saigon governs the river bowl of another year, and

1. *What is the purpose of this study?*

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

2. The second step is to gather relevant information and data. This can involve research, consultation with experts, or collecting data from various sources.

3. The third step is to analyze the information and data collected. This involves identifying patterns, trends, and relationships that can help in understanding the problem or question.

4. The fourth step is to develop a solution or answer. This involves applying the analysis to the problem and coming up with a plan or strategy to address it.

5. The fifth step is to implement the solution or answer. This involves putting the plan or strategy into action and monitoring the results to ensure that the problem is solved.

6. The sixth step is to evaluate the solution or answer. This involves assessing the effectiveness of the solution and identifying any areas for improvement.

7. The seventh step is to communicate the solution or answer. This involves sharing the results of the analysis and the solution with the relevant stakeholders.

8. The eighth step is to reflect on the process. This involves thinking about what worked well and what could be improved for future tasks.

9. The ninth step is to document the solution or answer. This involves creating a record of the solution and the steps taken to reach it.

10. The tenth step is to review the solution or answer. This involves checking back on the solution to ensure that it is still valid and effective.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and the role of the accounting system in providing reliable financial information.

2. It also highlights the need for transparency and accountability in financial reporting, emphasizing the importance of disclosing all relevant information to stakeholders.

3. The document further outlines the responsibilities of management and the board of directors in ensuring the integrity of the financial statements.

4. Finally, it concludes by stating that the accounting system is a critical component of the organization's financial management and should be used to support decision-making and strategic planning.

work in the center of Saigon once more. I was hit by a renewed awareness of how amazingly this city mixed the cheerfully peaceful with things too horrible to think about.

In the Central Market, women picked their way among fruit and vegetable stands, trip after trip, as they did every day. But right here, in the heart of the city, a boy of 12 had been stabbed. As he dragged himself away, he met a soldier, threw a knife over him, and stopped him in death.

I knew of similar happenings too grim to repeat. All the greater was my relief when the next coup d'état brought nothing worse than confusion and perplexity.

Amid Trouble, a Break for Soup

My first night in Saigon. He had come at the airport, where I was waiting to meet a friend in the U.S. Air Force. Rebel tanks raced to block the runways. It was then that a tank rolled up beside me and stopped, where two soldier-bombers armed with rockets roared in for their menacing passes.

Followed by tanks downtown to the radio station, just taken over by the insurgents of Lt. Pham Ngoc Thio and Brig. Gen. Lan Van, but page 847) Colonel Thio broadcast that Lt. Gen. Nguyen Khanh, the Vice Commander in Chief, must

That night more flames than usual dropped around Saigon. The many stories of pure gold. By morning, the city was a confusion. The radio station for General Khanh. It broadcast that General Thio and General Lan were crushed and in hiding.

Extra flares again shower brightly, and next morning, Lt. General Khanh had been deposed. The commander in chief was now Maj. Gen. Tran Van Mui.

Amid this confusion, I spoke with a soldier on a rebel tank. "We are orders," he said. Last night an officer woke us up and told us to get on these tanks. We are waiting for orders from whom? He didn't know.

While trucks full of soldiers in battle gear rolled through the streets, civilians took their morning break for Chinese soup in a soup parlor on Vo Thanh Street, the tank was arrested. Editors talked about censorship, the tanks a business, students about success, and everybody about success.

There was a kind of good sense—a Saigonese ability to concentrate on the essentials—was also brought home to me that day. The city, so often a mad, madly tropical with palms, fish ponds, and fields, was a place of order and water.

And a lot of VC. My driver said they came here always in groups of at least 100. Please, when we go back to the city.

Men rounded nets, children flew kites. On the beach here were as calm as the sea. In the South Sea. In the well-guarded coast headquarters, an officer said. At night, of course, you can hear the guns. The city is a lot of the mayor.

A young man with black pajamas and an old helmet sat on a bench, waiting. At last, he got a hearing.

He says somebody keeps getting into his coat pocket," said the official. "We'll now

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

2. Next, it is important to gather relevant information and data. This can be done through research, consultation with experts, or by analyzing existing data sets.

3. Once the information is gathered, the next step is to analyze it. This involves identifying patterns, trends, and relationships that can help in understanding the problem.

4. After analysis, the next step is to develop a solution or plan. This involves identifying the most effective approach to solve the problem, taking into account the available resources and constraints.

5. Finally, the solution is implemented and the results are evaluated. This involves monitoring the progress of the solution and making adjustments as needed to ensure that the problem is solved effectively.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

2. The second step is to gather relevant information and data. This can be done through research, consultation with experts, or by analyzing existing data sets.

3. The third step is to develop a hypothesis or a proposed solution. This is based on the information gathered in the previous step and is often a tentative conclusion that needs to be tested.

4. The fourth step is to test the hypothesis or solution. This is done by conducting experiments, simulations, or other forms of analysis to see if the proposed solution works as intended.

5. The fifth step is to evaluate the results of the test. This involves comparing the results with the expected outcomes and determining if the hypothesis was supported or refuted.

6. The final step is to draw a conclusion based on the results of the test. This is a final statement that summarizes the findings and provides a clear answer to the original question or problem.

in honor of Buddha, bringer of civilization.

As the news grew grimmer still—with American advisers now dying every day—I was glad to find refuge in Saigon whose cheerfulness had not yet been shaken.

"South Viet Nam has the best industrial base in Southeast Asia," said a businessman from New Orleans selling machine tools. "Two thousand jobs in plastics, eight thousand in textile mills. Sugar refineries, paper mills, rubber products: the place is loaded with opportunities!"

Optimism Survives Amid Turmoil

Prime Minister Phan Huy Quat (page 836) told me, "It is not easy to bring together so many political factions. But I think we can succeed. I am optimistic."

So was Brig. Gen. Robert K. Rowland of the U.S. Air Force. As we walked into the Military Medical School, he said, "An awful lot of wounded died because there was nobody to treat them before they were flown out. But this is a great day! Graduation of the first class of Vietnamese air-evacuation mechanics."

They went to take the oath. The regiment carried the name of 1st Sgt. James F. Feltz from California, who was mortally wounded as he gave an heroic response to a Vietnamese General. Rowland was proud. "When you look at these boys, how can you be pessimistic?"

Then I met the Venerable Tam Chai, the head of the Buddhist Institute for Social Affairs (page 837). His optimism took a different tack.

"In Saigon," he said, "the people live calmly. But in the countryside they fear for their lives every day." He had just visited central Viet Nam. In one week, he said, A.C. forces were there—and also the strafes and bombings by government forces—had brought death to some 4,000 men, women, and children.

"Four thousand South Vietnamese? Out of 14,500,000 in the country? In the United States, with its 193,000,000, a disaster of the same proportion would mean 55,000 killed in one week alone."

"The war must end soon," said the Venerable Tam Chai. He was confident that the end would come within a year.

Loth, who was with us, agreed and quoted Confucius: "When difficulties are greatest, the solution is closest."

Dean Rusk, the United States Secretary of State, had said that not only the Viet Cong and their North Vietnamese allies stopped

their aggression could South Viet Nam be at peace. But would the Viet Cong stop?

On my last day in Saigon I visited the sage Sao Huan. He was a master of geometry. The Taoist science of adapting to one's surroundings to best advantage. Clues to the future, he said, could be found in Saigon's geography.

I had heard that the name Saigon meant "the place of the boxwoods."

Yes," he said. "But it also has another meaning." He showed me two Chinese characters. "In Cantonese, *Tau Can* roughly meaning given to the Westerners—as a vessel gives tribute to his ruler. In 1862 the French demanded a place to settle, and the Vietnamese deliberately gave them a bad spot. Look."

He unrolled a map and pointed to the curve in the Saigon River (map, page 830). "It is a curve like a pair of arms, in supplication—Saigon to supplicate to the countryside across the river." No regime, he added, Vietnamese or foreign, could last more than ten years in Saigon. The dictatorship of Ngo Dinh Diem had lasted nine and a half.

What of the French, after nearly 100 years?

"Yes, because they also had Hanoi, an excellent spot, to counterbalance Saigon."

What if a bridge were built, and the city expanded right over the unfortunate river curve? "That would help. But remember, the forces of nature do not determine everything."

Human forces must play a role also, in harmony with nature. Good things happen when human forces reflect high moral virtue."

"Men Get What They Deserve"

"Let I have a wife. Hadn't the Viet Cong just attacked the village where I had my place across the river, 500 yards from my hotel?"

The sage Sao Huan looked at me patiently. "Suppose a man receives a ton of silver, but his virtue does not deserve that much. He deserves only 100 pounds. What will happen when he gets a ton? He will be crushed. Men get what they deserve."

The dark walls displayed pictures of Chinese and a picture of Kinh Duong Vuong, the king who supposedly ruled the Vietnamese about 5,000 years ago, also pictures of Buddha and of Christ.

"We must harmonize many schools of thought," said the sage Sao Huan.

I went out into the bright sun, wondering. Perhaps harmony would come to Saigon after all, and good things to all Viet Nam. What people could deserve luck more.

FRANK R. GARDNER, Editor of *National Geographic*, and others—lifted recently for Frank Starr, *National Geographic* Associate Editor. Seeking aerial views of Budapest, he half-jokingly asked the Foreign Ministry for a Hungarian Air Force pilot. A surprising red tape snarped his request. It took a week over the Parliament Building and Danube River. Then a Western aerial photographer, Captain Max, was sent to the city. Earlier he had spent some weeks in the city. He had been in the city for a long time. Mr. Starr's letter to the Foreign Ministry was received. The *National Geographic* Society is now planning to send a team to Budapest. The team will be made up of a pilot, a photographer, and a writer. The team will be sent to Budapest in the next few weeks. The team will be sent to Budapest in the next few weeks. Wherever Pepsi is poured,

ROYAL-GLOBE IS THERE!

"Come alive! You're in the Pepsi generation!" Growing millions are starting the reactions to these words. In homes across the U.S.A., along South American boulevards, deep in the Amazon bush, and in the desert courtyards of the Middle East, people are translating Pepsi-Cola's slogan into many languages and dialects. And wherever Pepsi is poured, Royal-Globe is there.

At Pepsi-Cola's new world headquarters in New York City, plans are being put into action to further increase markets for Pepsi-Cola and its growing family of fine products. This expanding volume calls for in-

creased insurance, and Royal-Globe Insurance Companies are privileged to write the myriad coverages needed by Pepsi-Cola Company. Large policyholders like Pepsi-Cola Company choose Royal-Globe for the scope, resourcefulness and creativity of its underwriting.

Millions of men and women prefer Royal-Globe for another reason: it brings better service with a easy reach. 8,000 independent agents are the key men in that service. They choose to represent Royal-Globe because Royal-Globe helps them do a better job for their clients. To avoid red tape in insurance, demand the Red Shield of Royal-Globe on every policy you buy.

Which of these 4 dinosaurs is your favorite?

(See them in Sinclair Dinoland at the World's Fair!)

BRONTOSAURUS a "D-foot dinosaur" roamed the earth over a hundred million years ago when there was no man. It ate only plants and was as long as a football field.

TRICERATOPS had a large horned head. It was a vegetarian dinosaur and was about the size of a car.

ANKYLOSAURUS had a bumpy back and a tail that could whip back and forth.

TYRANNOSAURUS was a large, powerful dinosaur that ate meat. It was about the size of a school bus.

We know you want to see the Sinclair Dinoland at the New York World's Fair. We hope you and your family come to the fair to see this exciting re-creation of prehistoric land. For a more pleasant trip, we'd be happy to show your route through interesting scenic country. For example, the Dixie and Tri

The great thing about a Sunlane Cruise is,

You wake up one morning and you're in Sardinia.

You visit up to 9 Mediterranean ports and check out only one.

There's nothing on your mind but seeing Europe.

You get a ~~sumptuous~~ all your meals and ~~European~~ on the bargain.

Your vacation isn't over when you head for home.

The only bad thing about a Sunlane Cruise is, Europe isn't farther away.

The new Parker 75...in solid sterling silver

*The Parker 75 is the first personal-fit pen tailored to write his own way. It costs \$24.**

The Parker 75 is a gift both personal and memorable. No other gift can be so completely custom-fitted to its owner.

The new fit... computer grip post... fingers... There is... pressure... fingers do not tire.

The pen can be adjusted to the exact angle at which he writes. His hand stays relaxed. The angle is set by a dial... The 75 is pressure throughout.

The grace and beauty of his writing is enhanced by the custom flexing of the ink... Font sizes are available.

Sample what our Full Coil suspension does for comfort.

Highways try a car one way, byways another. Chevrolet handles both in manner you can see. A big springy car that when it comes up hills and over undulating and most cramped roads. There's a double shock absorber for each coil spring too and a front stabilizer bar to straighten out the curves.

We put more comfort in Chevrolet than in any other car you've ever driven. You should see a side

view of the suspension in action and see how it works. There are handouts about Chevrolet's Full Coil suspension when you enter Powerplant or the Chevrolet Show Room. It's a turning point that says Chevrolet's Full Coil suspension is a real thing.

Medicines

The most expensive medicines in the world today are those which have not yet been found.

While the search for new medicines goes on continually, a terrible price is being paid in thousands of lives lost for want of them.

If past achievements of pharmaceutical research can be taken as an indication of its future, many medicines that are desperately needed today may soon

be created in the research laboratories.

Parke-Davis has a far-ranging research program under way on heart disease, cancer, virus infections, malaria, small fever and other diseases that are world-wide in their impact. We look to the day when new and better medicines will cut their toll.

That's my boy!

Excitement for charter: join the happy crew in Bermuda!

Perhaps you cannot buy happiness. But here in Bermuda you can rent it by the hour, day, or week. There is nothing like sailing with friends under azure skies for banishing those home-grown cares.

You'll love these sparkling waters: reef-guarded, breeze-blessed, deep blue. You can cruise them for less than \$20 a day in a Firefly, Snipe, or O'Day Sailer. A Sunfish or Corvette is less. You may even see a race of the unique Bermuda Titled

water and meet the bizarre life of the coral reef. Or skim above it on water skis, in hired motor boats, or aboard a sight-seeing cruiser.

If you're a golfer—our seven spectacular links await you. Bring tennis racquets and fishing gear (or rent them here.) Our deep sea and reef fishing are famous, and less expensive than you'd guess.

Idea—why not bring the family? You'll enjoy exploring British Bermuda, from ancient Fort St. Catherine to Gibb's Hill Lighthouse, from 17th century St. George to shimmering crystalline caves. Evenings leave the children with a trustworthy Bermuda ranny and dance 'til the wee hours. Next morning, sleep late, brunch on the terrace

while the children splash in the pool.

So near to home, so faraway! Only 90 minutes flying time from eastern cities, an hour farther from the Midwest and Canada. Or a lazy weekend cruise by ship!

Dinghy, one of the trickiest rigs ever perpetrated on an unwary sailor.

Bermuda's Gulf Stream setting brings other joys. Like "coves for two" with the pinkest sand you ever basked on. You can dive below the

You'll find fabulous bargains here in spirits, clothing, and perfumes.

Accommodations tailored to your dreams: posh resort hotels. Smaller, more intimate hotels. Cottage colonies on the beach. Unique Bermuda guest houses, friendly and informal.

This is the weight control breakfast you can live with, month after month.

Glance again at the picture. Appetizing, isn't it? The Special K Breakfast is a normal, natural meal.

And in spite of its modest calorie count, it starts your day with a heaping helping of nourishment: Complete quality protein. Important vitamins and minerals. And energy to get you going.

A sensibly nutritious breakfast like this can en-

courage you to eat sensibly at lunch and dinner.

Key to the success of the Special K Breakfast is a uniquely delicious cereal: Kellogg's Special K. Besides being exceptionally high in protein, and low in fat, it has a flavor you'll relish every time you sit down to it.

Kellogg's Special K has become an important part of breakfast with millions of people.

Don't you think it deserves a place on your table?
